

BDVS is the New Era of Data Validation

Buck Data Validation Systems is a program that simultaneously tracks registrar productivity, data entry & coding accuracy.

Our system has the ability to cut your validation time in half and give you clear, concise reports instantly. BDVS returns IRR per chart, per registrar & per data field. This allows you to focus on individual & team areas for improvement and praise.

BDVS auto calculates every aspect of your registry validation and populates areas for review and accolade.

Your system is fully customized to fit the needs of your registry validation.

Taking the Frustration Out of Validation

Buck Data Validation Systems has taken what used to be multiple sheets of difficult to read information and combined them into one easy to read and use format.

Your workbook will calculate abstractors IRR and report areas of high and low percentage of accuracy. Abstractors productivity can also be tracked in charts per hour, IRR, average ISS & hospital length of stay. BDVS returns an accurate overview of your registry validation for teaching, training, and reporting.

Make It Yours

BDVS is customizable to all of your registry needs! We know hospitals have varying trauma registry guidelines. We customize every program to match the validation needs of individual hospitals.

Training & Support

We offer step by step video training and a user's manual for abstractors, validation team, & trauma directors. Online webinars are also available.

BDVS comes with a 6 month service contract. Technical support or alterations to your validation requirements will be promptly resolved.

BDVS Installed Workbook

Gives you a bird's eye view of your registries performance. BDVS Installed Workbook will automatically return quarterly & monthly breakdown reports, matching IRR with chart complexity and productivity.

BDVS Single Serving Pages

Validation Worksheet

Customizable worksheet that will streamline your validation process. Returns IRR per chart & per data field automatically.

Abstractor Productivity

Abstractor daily log worksheet will calculate abstraction time averages in conjunction with chart complexity.

Productivity

AVG Time per chart (minutes)	Total IRR
1:07	88.7%
AVG Charts per hour	AVG Injury Coding %
0.89	91.7%
AVG ISS	AVG Procedure Coding %
6.67	93.5%
AVG Hospital LOS	AVG Comorbid Coding %
2.90	66.7%
AVG ICU LOS	# of Charts needed for 7% Validation
0.33	6
Total Charts	% Validated
175.00	3.43%

Pricing Structure

BDVS Installed Workbook

\$500 per workbook

- Abstractor Productivity Workbook
- Validation Workbook
- Trauma Program Manager Workbook

This purchase also includes:

6 months of technical support

Customization of data entry points and reporting fields

Technical queries & training

Pricing Structure

BDVS Single Serving Pages

\$150 per worksheet

Validation Worksheet

Abstractor Productivity Worksheet

These Single Serving Pages do not include a Service Agreement .
